

Hydraulic Scissor Lift Model HL724

Easing the manual labour of lifting heavy loads and material to a safe working height

Easy to use and extremely robust, the lift can be operated via a toggle switch on a free-standing stand to raise and lower your material. As standard a height sensor is fitted which automatically moves the material up to the working height set as you work through the material. Fork lift slots are provided to place your material straight onto the lift table. The scissor lift can position to work with many different types of machines for safe and easy loading / offloading. On request bigger capacity lift tables are also available.

- Heavy duty steel construction
- Safety trip bar around 4 sides
- Fork lift access points
- Closed height 290mm / open height
- Hydraulic motor power 1hp / 2hp / 2.hp depending on size
- Freestanding control stand with manual rise / fall switch or height setting via the adjustable sensor
